I didn't know that people come into our lives, and sometimes, if we're terribly lucky, we get the chance to love them, that sometimes they stay, that sometimes you can, truly, depend on them. Cathie Beck was in her late thirties and finally able to exhale after a lifetime of just trying to get by. A teenage mother harboring vivid memories of her own hardscrabble childhood, Cathie had

spent years doing whatever it took to give her children the stability--or at least the illusion of it--that she'd never had. More than that, through sheer will and determination, she had educated them and herself too. With her kids in college, Cathie was at last ready to have some fun. The only problem was that she had no idea how to do it and no friends to do it with. So she put an ad in the paper for a made-up women's group: WOW . . . Women on the Way. Eight women showed up that first night, and out of that group a friendship formed, one of those meteoric, passionate, stand-by-you friendships that come around once in a lifetime and change you forever . . . if you're lucky.

A 2012 New York Times Notable Book A 2013 Los Angeles Times Book Award Winner in the Science & Technology category An engaging narrative about an incredible, life-giving organ and its imperiled modern fate. Did you know that breast milk contains substances similar to cannabis? Or that it's sold on the Internet for 262 times the price of oil? Feted and fetishized, the breast is an evolutionary masterpiece. But in the modern world, the breast is changing. Breasts are getting bigger, arriving earlier, and attracting newfangled chemicals. Increasingly, the odds are stacked against us in the struggle with breast cancer, even among men. What makes breasts so mercurial—and so vulnerable? In this informative and highly entertaining account, intrepid

science reporter Florence Williams sets out to uncover the latest scientific findings from the fields of anthropology, biology, and medicine. Her investigation follows the life cycle of the breast from puberty to pregnancy to menopause, taking her from a plastic surgeon's office where she learns about the importance of cup size in Texas to the laboratory where she discovers the presence of environmental toxins in her own breast milk. The result is a fascinating exploration of where breasts came from, where they have ended up, and what we can do to save them.

This book presents the most recent developments in oncologic breast surgery and takes full account of diagnostic, pathologic, and radiologic inputs. It is divided into three parts, the first of which discusses the premises underlying the modern surgical approach to breast cancer. The final part of the book covers different forms of surgery and other treatments in particular settings. Topics include plastic

and reconstructive surgery, DCIS surgery, radio-guided surgery, adjuvant systemic therapy, intraoperative radiotherapy, and the role of surgery in locally advanced and metastatic disease. The detailed descriptions of techniques are accompanied by numerous high-quality illustrations. This book will be of value to both experienced practitioners and surgical trainees.

This book offers valuable insights into the psychosocial characteristics of patients interested in cosmetic surgery. It identifies factors such as experiences of being mobbed during childhood, as well as the nature of social relationships and psychiatric disorders that can strengthen or inhibit patients' interest in aesthetic plastic surgery and influence their postoperative outcomes. The books plays close attention to individual psychosocial profiles and their connections to specific surgical interventions. On this basis, it subsequently develops a tool that helps physicians decide whether or not a given patient should be considered for aesthetic surgery. This book offers a handy tool for daily practice, while also paving the way for future research in

this field.
