 Are we living in an age where we are more boredom-prone? Or are other people boring us? Or could we be that boring person?! In our current information age, we are constantly connected to technology, and have so many varied ways to spend our leisure time that we should all surely never know what boredom feels like. Yet, boredom appears to be on the rise; it seems that the more we have to stimulate us, the more stimulation we crave. In a quest to relieve our boredom, we engage in dangerous risk-taking - from extreme sports to drugs to gambling to anti-social behaviour, or we overindulge in shopping or eating. The *Science of Boredom* explores the causes and consequences of boredom in the fast-paced twenty-first century. Parents are desperate to keep their children entertained during every waking moment, the education system is geared towards interactivity, and attention spans are dropping as we use multiple devices at all times. But the world of work can be increasingly repetitive and routine, and we are losing the ability to tolerate this everyday tedium. Using Sandi Mann's own

ground-breaking research into boredom, this book tells the story of how we act, react and cope when we are bored, and argues that there is a positive side to boredom. It can be a catalyst for humour, fun, reflection, creativity and inspiration. The radical solution to the 'boredom problem' is to harness it rather than try to avoid it. Allowing yourself time away from constant stimuli can enrich your life. We should all embrace our boredom and see the upside of our downtime.

Professor Kun Huang is widely known for his collaboration with Max Born in writing the classic monograph, "Dynamical Theory of Crystal Lattices". During his years of active research, he has made many important contributions to solid state physics. The present collection of papers is selected at his own choice as representing his most influential works. Thus one finds included his pioneering work on the interaction of radiation field with polar lattices and the resulting coupled vibration modes (later known as "polariton"); the systematic development of his theory of radiative and nonradiative multiphonon

transition processes associated with lattice relaxation; his early prediction of diffuse X-ray scattering due to crystal defects; and his recent research works on low-dimensional semiconductor structures, etc. Professor Huang has found by his experience that scientists interested in these papers often want to know more particulars underlying the research work (background, motivation and rationale involved etc.). Thus he was led to write a commentary which is published alongside the papers.

Forest Management and Planning

Scarecrow Press

Forest Management and Planning provides a focused understanding of contemporary forest management issues through real life examples to engage students. The methodology for the development of quantitatively-derived forest management plans - from gathering information to the implementation of plans at the forest level - are clearly explained. Emphasis is placed on the development of traditional commodity production forest plans using linear programming, the development of alternative forest plans, and problem resolution in planning. The authors have

developed this book based on their personal experience in teaching forest management courses and the review of ten forestry programs (Auburn University, University of Georgia, Iowa State University, Louisiana State University, Northern Arizona University, Ohio State University, Pennsylvania State University, University of Florida, Virginia Tech, and Oregon State University). The integration of extended case studies of a variety of scenarios as well as the inclusion of a section on report writing will engage students. Acknowledgement and integration of various software packages for forest management provide the most useful tools for those studying forest management and distinguish this book from the competition. This book is an ideal resource for students of Forest Management - primarily an upper-level course in forestry, and natural resource management, wildlife, and recreation programs. Real-life examples illustrated mathematically and graphically End-of-chapter questions Modern coverage of the planning and management of US Forest timber production Case study analysis Expansive applications drawn for

examples in the western US, the Lake States, the northeastern US, the southern US and Canada Detailed descriptions of models and solution methods for integrating a variety of wildlife habitat constraints

There's a new mystery to solve at Bayview High, and there's a whole new set of rules. The highly anticipated sequel to *One of Us Is Lying!* Come on, Bayview, you know you've missed this. A ton of copycat gossip apps have popped up since Simon died, but in the year since the Bayview four were cleared of his shocking death, no one's been able to fill the gossip void quite like he could. The problem is no one has

the facts. Until now. This time it's not an app, though—it's a game. Truth or Dare. Phoebe's the first target. If you choose not to play, it's a truth. And hers is dark. Then comes Maeve and she should know better—always choose the dare. But by the time Knox is about to be tagged, things have gotten dangerous. The dares have become deadly, and if Maeve learned anything from Bronwyn last year, it's that they can't count on the police for help. Or protection. Simon's gone, but someone's determined to keep his legacy at Bayview High alive. And the rules have changed. Fans of the hit thriller that started it all can watch the secrets of the Bayview Four be revealed in the *One of Us Is Lying* TV series now streaming on NBC's Peacock!

Honeybees make decisions collectively--and democratically. Every year, faced with the life-or-death problem of choosing and traveling to a new home, honeybees stake

everything on a process that includes collective fact-finding, vigorous debate, and consensus building. In fact, as world-renowned animal behaviorist Thomas Seeley reveals, these incredible insects have much to teach us when it comes to collective wisdom and effective decision making. A remarkable and richly illustrated account of scientific discovery, *Honeybee Democracy* brings together, for the first time, decades of Seeley's pioneering research to tell the amazing story of house hunting and democratic debate among the honeybees. In the late spring and early summer, as a bee colony becomes overcrowded, a third of the hive stays behind and rears a new queen, while a swarm of thousands departs with the old queen to produce a daughter colony. Seeley describes how these bees evaluate potential nest sites, advertise their discoveries to one another, engage in open deliberation, choose a final site, and navigate together--as a swirling cloud of bees--to their new home. Seeley investigates how evolution has honed the decision-making methods of honeybees over millions of years, and he considers similarities between the ways that bee

swarms and primate brains process information. He concludes that what works well for bees can also work well for people: any decision-making group should consist of individuals with shared interests and mutual respect, a leader's influence should be minimized, debate should be relied upon, diverse solutions should be sought, and the majority should be counted on for a dependable resolution. An impressive exploration of animal behavior, *Honeybee Democracy* shows that decision-making groups, whether honeybee or human, can be smarter than even the smartest individuals in them.
