Russell/Hertz/McMillan, BIOLOGY: THE DYNAMIC SCIENCE 4e and MindTap teach Biology the way scientists practice it by emphasizing and applying science as a process. You learn not only what scientists know, but how they know it, and what they still need to learn. The authors explain complex ideas clearly and describe how biologists collect and interpret evidence to test hypotheses about the living world. Throughout, Russell and MindTap provide engaging applications, develop quantitative analysis and mathematical reasoning skills, and build conceptual understanding. The first easy-to-use reference guide to saving 50% or more on the 250 most commonly prescribed medications in the United States. Over 40 million Americans lack health insurance. Another 40 million Americans are insured by Medicare and do not have prescription medications as a covered benefit. The 50 million covered by Medicaid are threatened by reduced benefits and limited formulary coverage. Even the 74 million Baby Boomers with health insurance are impacted, as pharmaceutical companies pass their costs on in the form of higher co-pays and insurance premiums. We all are affected by the problem of rising prescription drug costs. Drugs for Less is the answer to the problem. Empowering consumers with needed information, the book outlines seven simple strategies to reduce rising pharmaceutical prices. Here, for example, are tips on how to ensure that drugs you buy online are safe, guidelines on how to slice medications, and information on which generic drugs are more effective than the expensive brand-name versions. Most importantly, the book includes an extensive directory of the 250 most commonly prescribed medications with specific information on how to save money on that drug. Making sense of the convoluted system of pricing drugs and showing you how to beat it, Drugs for Less is the best investment you can make in your health. Now in its second edition, this highly successful guide to safe prescribing of the most common classes of drugs is your starting point for safe and effective practice. The first edition was a direct response to requests from students for a compendium of the 100 most important drugs in the NHS. Research led by Professor Emma Baker identified the 'top 100 drugs' by their importance and prescribing frequency. The top 100 drugs and the five most important intravenous fluids are presented using a clear, consistent layout across double-page spreads. Drugs are arranged alphabetically and also listed by organ system and clinical indication, providing multiple pathways into the information. Clinical pharmacology is discussed under the headings: common indications; mechanisms of action; important adverse effects; warnings; and important interactions. Practical prescribing is discussed under the headings: prescription; administration; communication; monitoring; and cost. A clinical tip is presented for every drug. Single-best-answer questions are provided for self-assessment and to show how information from several drugs may be integrated. *Pill Mill* Springer

For 5 years, Christian Valdes was at the center of the biggest drug operation in America. It was an operation that became internationally notorious, insanely violent and nonstop freaky. It made its kingpins millions and millions of dollars, and it made Valdes as much money as he could possibly make in a day -- because there were endless numbers of people lining up for what he had the power to give them. Those people were willing to do just about anything to get it. With the men, that generally meant money. With the women, that meant money - and almost any kind of sexual arrangement Valdes proposed. And the interesting part about this operation? It was completely legal. From 2000 to 2009, Florida's incredibly lax prescription drug laws fueled a huge spike in so-called pain management clinics, especially in the Fort Lauderdale-Miami area. CNN and other national news media outlets tagged these clinics as "Pill Mills" -- and with good reason. When Valdes managed them, they gave out heavy-hitter drugs like Xanax, Percocet, Oxycontin, Roxicodone and Methadone just like they were candy. And because the Sunshine State kept everybody in the dark about who was prescribing what, somebody could easily go into one clinic and get some Oxy and then head over to a different clinic for some more a few minutes later. Valdes helped a whole lot of people do just that - including a posse of strippers he sponsored - because he was running his own operation within the operation. Pill Mill is his no-holds-barred memoir of life in the center of the action as the whole pain clinic scam spiraled out of control. In this book, you'll hear this full-blooded Cuban's whole story - from the rough-and-tumble childhood and high school years that shaped him; to how he started dealing weed and eventually began growing it himself; to how he quickly learned how to work the pill mill scam and how he recruited friends and family to help him make the most money in the fastest amount possible; to how Hurricane Wilma almost put him behind bars for who knows how many years. Valdes also reveals the major players behind the pill mill scandals, talks about his frightening and sometimes hilarious conflicts with psychotic junkie patients and takes the reader inside one of the most notorious "Jungle Houses" of the time - a sad excuse for a clinic where junkies zoned out at a backyard barbeque, dozens of drug deals went down, and the owner, the infamous "Pill Mill" Vinny, sat behind a desk with over 200 grand in cash piled on top of it. For the first time, this book offers an insider's look at what happened when Florida became ground zero for pain pill abuse. At one point,

the country's top 50 prescription pain pill sellers were ALL in Florida - and 33 of those 50 were in Broward County, where I got involved in the racket. There were more than 150 storefront pain clinics in Broward at the height of the madness. This is a story that has yet to be told in movies, TV shows or even in another book. This is a story that could only happen in South Florida. Just like Christian Valdes is a guy you would only find in South Florida.

The Relevance of Ethnic Factors in the Clinical Evaluation of Medicines Diamond Pocket Books (P) Ltd.

For a research-based pharmaceutical company to be successful in the 1990s, it must have a strategic plan for the global development of new chemical entities. Global development can be defined as an attempt to reach all major markets as rapidly as possible and for many companies these will include the United States, Japan, Germany, France, Italy, UK and Canada, which together represent approximately 85% of the pharmaceutical market in the developed world. The mutual acceptance of foreign clinical data would reduce the time and resources required to develop a new medicine for the international market by eliminating the requirement for the routine repetition of clinical studies in local populations. In Japan this has been largely based on the belief that genetic differences in responsiveness may result in a different benefit/risk assessment for a new medicine, while requests in Europe and the United States for local data relate mainly to methodological and cultural considerations. The importance of this issue has been recognised internationally as it was one of the topics discussed at the International Conference on Harmonisation in Orlando (October 1993) and it is currently on the programme for ICH3 which will be convened in Yokohama in Japan in November 1995.
