This concise pocket-sized acupuncture guide is what professionals have been asking for! It is the first pocket atlas to cover all the major body and ear acupuncture points, including extensive coverage of the trigger points. Detailed descriptions of the localization, needling depth, indications, and functions of each point are provided. The different schools of ear acupuncture (e.g., Chinese vs. Nogier), often a source of confusion for practitioners, are presented side by side, usually in full-page illustrations, enhancing this book's usefulness as a daily reference guide. The presentation of three acupuncture therapy systems follows a clear didactic concept: All points are shown in text and image, and the localization of the points is aided by means of anatomic drawings and photographs. Coming from

diverse specialties, the authors provide you with the most complete, useful, and accurate information available. Acupuncture points are described using the "visual-didactic processing system," which is rapidly gaining praise and recognition for its easy-to-use format. The clearly written text is augmented by high-quality color images. Der Begriff der Homöosiniatrie beschreibt medizinische Konzepte, die sowohl auf denen der traditionellen chinesischen Medizin,

insbesondere der Akupunktur, als auch auf der europäisch geprägten klassischen Homöopathie von Samuel Hahnemann basieren. Dieses Buch bietet fundierte Informationen zu den homöosiniatrischen Verfahren im Überblick. Es verdeutlicht die Übereinstimmungen zwischen den energetischen Wirkungen der Akupunkturpunkte und den entsprechenden homöopathischen Arzneimitteln und zeigt, wie im Sinne einer Synergie die Heilwirkung über die jeweilige Wirkung der TCM und Akupunktur hinausgehen kann. Eine ideale Grundlage, die die ganzheitliche Homöosiniatrie einer größeren Zielgruppe nahe bringen kann.

Based on Five Elements theory, this practical, fully illustrated guide to performing facial enhancement acupuncture (also known as cosmetic acupuncture, facial revitalisation or facial rejuvenation acupuncture) shows in detail the acupuncture points, techniques and equipment used in this procedure. Facial enhancement acupuncture targets points and muscles of the face in order to improve the elasticity of the skin and general overall appearance, as well as addressing constitutional points on the legs, arms and body to balance and harmonise the inner elements. The author clearly explains the rationale behind the needling of each face and neck point, which are shown in colour illustrations. He also discusses the advantages of acupuncture over surgical intervention in dealing with wrinkles and sagging jaw lines, and a chapter is included on discussing treatment with

prospective patients, follow up and after care. As well as significantly improving the cosmetic appearance, facial acupuncture also has a strong whole body effect on the health and wellbeing of the person treated, and has a long and distinguished history in Chinese medicine. In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations.

He traces an intellectual genealogy of the burgeoning discipline of "experimental philosophy," provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.

In Christian theology, the teaching that Christ possessed both a human and divine will is central to the doctrine of two natures, but it also represents a logical paradox, raising questions about how a person can be both impeccable and subject to temptation. This volume explores these questions through an analytic theology approach, bringing together 15 original papers that explore the implications of a strong libertarian concept of free will for Christology. With perspectives from systematic theologians, philosophers, and biblical scholars, several chapters also offer a comparative theology approach, examining the concept of impeccability in the Muslim tradition. Therefore, this volume will be of interest to scholars and graduate students working in analytic theology, biblical scholarship, systematic theology, and Christian-Islamic dialogue.
