In 2008, Thomas "TomSka" Ridgwell uploaded a short animated film to YouTube; he called it asdfmovie. It has since been viewed more than 50 million times and has spawned eight sequels and many, many dedicated fans. Now, for the first time, the weird and wonderful world of asdf has exploded onto the page in ART IS DEAD, a book conceived and written by Tom and illustrated by Matt Ley. Featuring much-loved characters from the films, as well as brand-new, never-before-seen comics and bonus material - including the asdf origin story and Tom's own sketches - ART IS DEAD is a comic book like no other. Expect trains, potatoes, suicidal muffins and jokes about "death, destruction and things talking that don't normally talk", all wrapped up in book so awkwardly shaped it will make your shelves look weird. (Sorry about that.)

Exponentially increasing information on biological organisms coupled with increasing computational power in the past decade have broadened the perspective of fundamental biological research, bringing about considerable promise and unprecedented potential for practical applications in biotechnology. As one emergent discipline, synthetic biology aims to design and engineer novel biologically-based parts, devices, and systems, in addition to redesigning existing, natural biological systems. Although previously relegated to demonstration studies, more recent research in synthetic biology has focused on the rational engineering of industrial microorganisms with the potential to address many of society's critical challenges. Within the realm of industrial microbiology, progress in the field of synthetic biology has enabled the development of, for example, new biosynthetic pathways for the production of renewable fuels and chemicals, programmable logic controls to regulate and optimize cell function, and robust microbes for the destruction of harmful environmental contaminants. Some of the exciting examples included producing anti-malarial drug, anti-cancer taxol precursor and various biofuel molecules in *E. coli* and yeast. In addition, these researches have also greatly enhanced our understanding of the cellular machinery and its regulation in some of the industry important microbes, laying an important foundation for further design and engineering of biological function for even greater application. For these reasons, we present here a collection of articles from the leading edge of the field of synthetic biology, with a specific focus on the development in industrial microorganisms. It is the intent of this collection to reach a wide audience whose interests and expertise spans from development of novel synthetic biology methodologies and theories (both experimental and computational) to practical applications seeking to address issues facing the world today.

Recent archaeological findings confirm Osman's 25-year-old discovery of the location of the city of the Exodus • Explains why modern scholars have been unable to find the city of the Exodus: they are looking in the wrong historical period and thus the wrong region of Egypt • Details the author's extensive research on Hebrew scriptures and ancient Egyptian texts and records, which

allowed him to pinpoint the Exodus site • Reveals his effort to have his finding confirmed by the Egyptian government, including his debates with Zahi Hawass, Egyptian Minister for Antiquities Affairs When the first archaeologists visited Egypt in the late 1800s, they arrived in the eastern Nile Delta to verify the events described in the biblical Book of Exodus. Several locations believed to be the city of the Exodus were found but all were later rejected for lack of evidence. This led many scholars to dismiss the Exodus narrative merely as a myth that borrowed from accounts of the Hyksos expulsion from Egypt. But as Ahmed Osman shows, the events of Exodus have a historical basis and the ruins of the ancient city of Zarw, where the Road to Canaan began, have been found. Drawing on decades of research as well as recent archaeological findings in Egypt, Ahmed Osman reveals the exact location of the lost city of the Exodus as well as his 25-year effort to have this finding confirmed by the Egyptian government, including his heated debates with Zahi Hawass, former Egyptian Minister for Antiquities Affairs. He explains why modern scholars have been unable to find the city of the Exodus: they are looking in the wrong historical period and thus the wrong region of Egypt. He details his extensive research on the Pentateuch of the Hebrew scriptures, the historical scenes recorded in the great hall of Karnak, and other ancient source texts, which allowed him to pinpoint the Exodus site after he discovered that the Exodus happened not during the pharaonic reign of Ramses II but during that of his grandfather Ramses I. Osman concluded that the biblical city of the Exodus was to be found at Tell Heboua at the ruins of the fortified city of Zarw, the royal city of Ramses I—far from the Exodus locations theorized by previous archaeologists and scholars. In 2012, after 20 years of archaeological work, the location of Zarw was confirmed by Egyptian officials exactly where Osman said it would be 25 years ago. Thus, Osman shows that, time and again, if we take the creators of the source texts at their word, they will prove to be right.

The first major study by a Russian Marxist Historian of the Stalinist purges which are often collectively referred to by the year they reached their greatest intensity: 1937. Rogovin shows that the purges were aimed at the physical annihilation of the growing socialist opposition to Stalin's bureaucratic regime. Focused on Leon Trotsky and his thousands of supporters, the purges were a blow against the October Revolution, its leaders and its heritage.

The YIAY Book Peabody Museum of Archaeology & Volume 1 of Non-nominative Subjects (NNSs) presents the most recent research on this topic from a wide range of languages from diverse language families of the world, with ample data and in-depth analysis. A significant feature of these volumes is that authors with different theoretical perspectives study the intricate questions raised by these constructions. Some of the central issues include the subject properties of noun phrases with ergative, dative, accusative and genitive case, case assignment and checking, anaphor-antecedent coreference, the nature of predicates with NNSs, whether they are volitional or non-volitional, possibilities of control coreference and agreement phenomena. These analyses have significant implications for theories of syntax and verbal semantics, first language acquisition of NNSs, convergence of case marking patterns in language contact situations, and the nature of syntactic change.
