Milford, Massachusetts, incorporated in 1780, rests on the cusp of the Blackstone River Valley National Heritage Corridor. Granite and manufacturing jobs drew immigrants to this small town during the Industrial Revolution to form a richly textured community. In this collection of the best of his columns, local historian Paul E. Curran chronicles the lives and achievements of many who left indelible imprints on Milford. Some contributed distinctive architecture, such as the

stately Town Hall and the only Irish round tower in the country. Others offered gifts for the mind--major contributions to the national library system and the original version of the children's classic The Little Engine that Could. There were extraordinary athletes, intrepid travelers and those who marked the social conscience through personal sacrifice. Milford Chronicles celebrates the spirit of all who contributed to the community's rich and enduring history.

The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the

degrading effects of all forms of pollution – air, water, soil, and noise. Since pollution is a direct or indirect consequence of waste, the seemingly idealistic demand for “zero discharge” can be construed as an unrealistic demand for zero waste. However, as long as waste continues to exist, we can only attempt to abate the subsequent pollution by converting it to a less noxious form. Three major questions usually arise when a particular type of pollution has been identified: (1) How serious is the pollution? (2) Is the technology to abate it available? and (3) Do the costs of abatement justify the degree of abatement achieved? This book is one of the volumes of the Handbook of Environmental Engineering series. The

principal intention of this series is to help readers formulate answers to the last two questions above. The traditional approach of applying tried-and-true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a "methodology of pollution control." However, the realization of the ever-increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken.

To most people, technology has been reduced to computers, consumer goods, and military weapons; we speak of "technological progress" in terms of RAM and CD-ROMs and the flatness of our television screens. In *Human-Built World*, thankfully, Thomas Hughes restores to technology the conceptual richness and depth it deserves by chronicling the ideas about technology expressed by influential Western thinkers who not only understood

its multifaceted character but who also explored its creative potential. Hughes draws on an enormous range of literature, art, and architecture to explore what technology has brought to society and culture, and to explain how we might begin to develop an "ecotechnology" that works with, not against, ecological systems. From the "Creator" model of development of the sixteenth century to the "big science" of the 1940s and 1950s to the architecture of Frank Gehry, Hughes nimbly charts the myriad ways that technology has been woven into the social and cultural fabric of different eras and the promises and problems it has offered. Thomas Jefferson, for instance, optimistically hoped that technology could be combined with nature to create an Edenic environment; Lewis Mumford, two centuries later, warned of the increasing mechanization of American life. Such divergent views, Hughes shows, have existed side by side, demonstrating the fundamental idea that "in its variety, technology is full of contradictions, laden with human folly, saved by occasional benign deeds, and rich with unintended consequences." In *Human-Built World*, he

offers the highly engaging history of these contradictions, follies, and consequences, a history that resurrects technology, rightfully, as more than gadgetry; it is in fact no less than an embodiment of human values.

Moving beyond the debate over whether and to what degree mild head injury has lasting neuropsychological sequelae, this book is predicated on the assumption that it does cause some problems in some circumstances for some people. It focuses on the practical questions of who is injured, how injuries manifest themselves, and what evaluation and treatment strategies are optimal, for families as well as patients. The distinguished authors bring to their task not only scientific expertise but extensive day-to-day clinical

experience. This book will be widely welcomed as the first comprehensive overview of what we have learned from research and clinical experience about these difficult cases.

The development of EU enlargement has raised many thorny issues unanticipated by the framers of the EC Treaty. A significant upshot of these issues is that the concept of European identity – defined in terms of such factors as culture, history and economics – has supplanted the long-dominant theme of ‘widening and deepening,’ particularly since the Union’s expansion has become primarily eastward. The major contribution of this important book lies in its analysis of the conceptualization and perception of enlargement from various points of view, focusing on the concerns of stakeholders and the ‘identity’ conflicts and

uncertainties incurred by enlargement initiatives. In the course of its presentation, it details the actual pre-accession Europeanization process and its complex history. Among the key elements discussed are the following: the conflict between ‘widening’ and ‘deepening’ and the effect on EU institutional reform; institutional requirements on candidate countries; pre-accession criteria and negotiations; administrative capacity, judicial capacity, and legal approximation in accession states; capacity of the EU to absorb new Member States; and EC law as part of European identity. Also covered are specific historical details of particular pre-accession negotiations (e.g., Greece, Spain, Portugal, Malta, and Cyprus), the still inconclusive negotiations with Turkey and the Western Balkan states, and political factors involved in the non-accession of Norway, Iceland and Switzerland. Assembling powerful evidence and applying incisive analysis, the author’s conclusion shows that, absent further (and major) EU institutional reform, it will be difficult for an enlarging Union to continue to ‘deliver the goods.’ A watershed in the continuing great debate

on the fulfilment of the EC Treaty’s determination to foster and promote ‘an ever closer union of the peoples of Europe,’ this book will prove invaluable to anybody interested in the European integration project, particularly lawyers, academics, officials and policymakers in the EU Member States.

This text offers an intervention into the debate between communitarianism and liberalism. It argues for a theory of "contexts of justice" that leads beyond the confines of the debate as it has been understood and posits the possibility of a new conception of social and political justice.

Information Management and Technology Issues Springer Science & Business Media
There is a growing tendency to organize various aspects of business life by projects, and to set up temporary organizations in a competition where speed and adaptability becomes a major necessity. Organizing by projects is perceived as a good way to ensure action and to stress the importance of getting work done. However, there is a need to

balance the stress on action so that learning capabilities are not only retained, but augmented. Projects as Arenas for Renewal and Learning Processes provides examples of how different types of projects function from a learning or renewal perspective, taken from a wide variety of real-life environments in industrial and public organizations. This book illustrates the mistaken habit of assuming too much in the project area: for example, project notions are, in fact, culture-dependent; classical market-oriented contracting business relations do not fit with the learning dimension of projects; and long-term learning on core competencies and product development projects need to be connected. The book is also intended to represent many of the research frontiers in the project field. Enhancing learning capabilities is - or should be - of a mutual concern to researchers and managers alike.

Back in print--the standard work on Heino Engel's structure systems. The hundreds of drawings and photographs reproduced in this hardback volume offer almost endless variations on the many structural

systems that can keep buildings together: within a few pages of one another, tents, domes and cubes are shown supported by poles, cables, ribs, rafters and beams. Engel's presentation and explanation of this highly complex material differs fundamentally from others' work on the subject in that he focuses entirely upon the functions and design effects of these mechanisms, without regard for technical details: More than an engineering text, this is a catalogue of ideas and forms for architects and dreamers, a David Macaulay book for adults. Structure Systems skips over more commonly treated special designs and completed buildings for typical, representative and surprising shapes. As a reference work or daydream material, it is an indispensable repertoire of forms.

Das Buch behandelt die Public-Value-Debatte ausgehend von einer kulturwissenschaftlichen Position. Um gegenwärtige und kommende Perspektiven zu sammeln, die die vielschichtige medienpolitische Debatte auch noch die nächsten Jahre beschäftigen

werden, ordnet das Buch theoretische und praktische Ansichten. Unter Einbindung von medienökonomischen, medienpolitischen und mediensoziologischen Perspektiven werden verschiedene Argumentationsweisen des Fach- und Mediendiskurses in Beiträgen dargestellt und analysiert. Dabei werden der Stellenwert der Diskussion, die sich derzeit noch immer überwiegend auf Anforderungen an den öffentlich-rechtlichen Rundfunk konzentriert, und mögliche Konsequenzen für die Medienentwicklung zum Thema.
