The cognitive science of religion is a relatively new academic field in the study of the origins and causes of religious belief and behaviour. The focal point of empirical research is the role of basic human cognitive functions in the formation and transmission of religious beliefs. However, many theologians and religious scholars are concerned that this perspective will reduce and replace explanations based in religious traditions, beliefs, and values. This book attempts to bridge the reductionist divide between science and religion through examination and critique of different aspects of the cognitive science of religion and offers a conciliatory approach that investigates the multiple causal factors involved in the emergence of religion.

Over the past two decades, Abbas Kiarostami - the Iranian film director of *Where is the Friend's House?*, *Life and Nothing More*, *Through the Olive Trees*, *Close Up*, *A Taste of Cherry*, *The Wind Will Carry Us*, *Ten*, *Shirin*, *Certified Copy* and *Like Someone in Love* - has appeared regularly at festivals and on campuses, where he has worked closely for several days with young filmmakers, shepherding them and their projects, sending them out with cameras, then screening and discussing the results. Pieced together from notes made over a period of nearly ten years at several of these workshops, *Lessons with Kiarostami* is a distillation of Kiarostami's filmmaking techniques and working methods, and most importantly a series of practical guideposts for aspiring filmmakers.

Islamic Liberalism Yale University Press
The resurgence of Islamic fundamentalism in the 1980s influenced many in the Islamic world to reject Western norms of liberal rationality and to return, instead, to their own tradition for political and cultural inspiration. This rejection of foreign thought threatens to end the centuries-long dialogue between Islam and the West, a dialogue that has produced a nascent Middle Eastern liberalism, along with many less desirable forms of discourse. With *Islamic Liberalism*, Leonard Binder hopes to reinvigorate that dialogue, asking whether political liberalism can take root in the Middle East without a vigorous Islamic liberalism. But, Binder asks, is an Islamic liberalism possible? The Islamic political community presents special problems to the development of an indigenous liberalism. That community is conceived of as divinely ordained, and its notions of the good are to be derived from scriptural revelation, not arrived at through rational discourse. Liberal politics would seem to stand little chance of surviving in such an atmosphere, let alone thriving. Binder responds to the challenge of Edward Said's critique of Orientalism, of a range of neo-Marxian development theorists, of Sayyid Qutb's fundamentalist vision, of Samir Amin's vision of Egypt's role in the Arab awakening, of Tariq al-Bishri's new populism, of Zaki Najib Mahmud's

pragmatism, and the structuralism of Arkoun and Laroui. The deconstruction of these varied texts produces a number of persuasive hermeneutical conclusions that are sequentially woven together in a critical argument that refocuses our attention on the central question of political freedom and democracy. In the course of constructing this argument, Binder reopens the dialogue between Western modernity and Islamic authenticity and reveals the surprising extent to which there is a convergent interest in liberal, democratic, civil society. Finally, in a concluding chapter, he addresses the prospects for liberalism in the three major bourgeois states of Islam—Egypt, Turkey, and Iran.

1944, Kohima — a small, sleepy town in northeast India. Subhash Chandra Bose and his Indian National Army (INA) along with the Japanese, are on the brink of bringing the Empire to its knees and forcing the British out of India. But, inexplicably, the tables turn. The INA's advance is thwarted and the victory march to Delhi is halted. Seventy years later, the British admit that the Battle of Kohima was the greatest battle they had ever fought. Even more so than the battles of Waterloo and Dunkirk. Was it then that old Indian curse — betrayal? Someone from within Netaji's own ranks? Were there forces other than the British, waiting in the shadows closer to home, who stood to gain even more from the INA's defeat? Or was it just love that irrevocably altered the course of India's destiny? *The Wrong Turn: Love and Betrayal in the Time of Netaji*, is a sweeping tale of passion set against the freedom struggle. Debraj, the rakish playboy and scion of a distinguished Calcutta family, and Nishonko, the fiery revolutionary sworn to the cause of the INA, must not only fight their common enemy, but also for the love of Aditi, the rebel with the healing touch. A haunting tale of love, friendship and betrayal of an entire nation, *The Wrong Turn* veers

inexorably towards a poignant redemption.

The Big One and what we can do to get ready for it. Mention the word earthquake and most people think of California. But while the Golden State shakes on a regular basis, Washington State, Oregon, and British Columbia are located in a zone that can produce the world's biggest earthquakes and tsunamis. In the eastern part of the continent, small cities and large, from Ottawa to Montréal to New York City, sit in active earthquake zones. In fact, more than 100-million North Americans live in active seismic zones, many of whom do not realize the risk to their community. For more than a decade, Gregor Craigie interviewed scientists, engineers, and emergency planners about earthquakes, disaster response, and resilience. He has also collected vivid first-hand accounts from people who have survived deadly earthquakes. His fascinating and deeply researched book dives headfirst into explaining the science behind The Big One -- and asks what we can do now to prepare ourselves for events geologists say aren't a matter of if, but when.

Mohamad Tavakoli-Targhi offers a corrective to recent works on Orientalism that focus solely on European scholarly productions without exploring the significance of native scholars and vernacular scholarship to the making of Oriental studies. He brings to light a wealth of eighteenth- and nineteenth-century Indo-Persian texts, made 'homeless' by subsequent nationalist histories and shows how they relate to Indo-Iranian modernity. In doing so, he argues for a radical rewriting of Iranian history with profound implications for Islamic debates on gender.

In 1997, Eisenbrauns published the highly-regarded two-volume Phonologies of Asia and Africa, edited by Alan Kaye with the assistance of Peter T. Daniels, and the book rapidly became the standard reference for the phonologies of the Afro-Asiatic languages. Now the concept has

been extended, and Kaye has assembled nearly 50 scholars to write essays on the morphologies of the same language group. The coverage is complete, copious, and again will likely become the standard work in the field. Contributors are an international Who's Who of Afro-Asiatic linguistics, from Appleyard to Leslau to Voigt. It is with great sadness that we report the death of Alan Kaye on May 31, 2007, while these volumes were in the final stages of preparation for the press. Alan was diagnosed with bone cancer on May 1 while on research leave in the United Arab Emirates and was brought home to Fullerton by his son on May 22.

have dreams—things we fantasize about doing and generally never get around to. This is the story of Azar Nafisi's dream and of the nightmare that made it come true. For two years before she left Iran in 1997, Nafisi gathered seven young women at her house every Thursday morning to read and discuss forbidden works of Western literature. They were all former students whom she had taught at university. Some came from conservative and religious families, others were progressive and secular; several had spent time in jail. They were shy and uncomfortable at first, unaccustomed to being asked to speak their minds, but soon they began to open up and to speak more freely, not only about the novels they were reading but also about themselves, their dreams and disappointments. Their stories intertwined with those they were reading—Pride and Prejudice, Washington Square, Daisy Miller and Lolita—their Lolita, as they imagined her in Tehran. Nafisi's account flashes back to the early days of the revolution, when she first started teaching at the University of Tehran amid the swirl of protests and demonstrations. In those frenetic days, the students took control of the university, expelled faculty members and purged the curriculum. When a radical

Islamist in Nafisi's class questioned her decision to teach *The Great Gatsby*, which he saw as an immoral work that preached falsehoods of "the Great Satan," she decided to let him put *Gatsby* on trial and stood as the sole witness for the defense. Azar Nafisi's luminous tale offers a fascinating portrait of the Iran-Iraq war viewed from Tehran and gives us a rare glimpse, from the inside, of women's lives in revolutionary Iran. It is a work of great passion and poetic beauty, written with a startlingly original voice. Praise for *Reading Lolita in Tehran* "Anyone who has ever belonged to a book group must read this book. Azar Nafisi takes us into the vivid lives of eight women who must meet in secret to explore the forbidden fiction of the West. It is at once a celebration of the power of the novel and a cry of outrage at the reality in which these women are trapped. The ayatollahs don't know it, but Nafisi is one of the heroes of the Islamic Republic."—Geraldine Brooks, author of *Nine Parts of Desire*

'What a remarkable book this is; tender, funny, brave, heartfelt, radiant with love and life, and with the love of life. It brought me often to laughter and - several times - to tears' Robert Macfarlane From the Sunday Times bestselling author of *Your Life in My Hands* comes this vibrant, tender and deeply personal memoir that finds light and love in the darkest of places. As a specialist in palliative medicine, Dr Rachel Clarke chooses to inhabit a place many people would find too tragic to contemplate. Every day she tries to bring care and comfort to those reaching the end of their lives and to help make dying more bearable. Rachel's training was put to the test in 2017 when her beloved GP father was diagnosed with terminal cancer. She learned that nothing - even the best palliative care - can sugar-coat the pain of losing someone you love. And yet, she argues, in a hospice there is more of what matters in life - more love, more strength, more kindness, more joy, more tenderness, more grace, more compassion - than you could ever imagine.

For if there is a difference between people who know they are dying and the rest of us, it is simply this: that the terminally ill know their time is running out, while we live as though we have all the time in the world. *Dear Life* is a book about the vital importance of human connection, by the doctor we would all want by our sides at a time of crisis. It is a love letter - to a father, to a profession, to life itself.

In *Clinical Bioinformatics, Second Edition*, leading experts in the field provide a series of articles focusing on software applications used to translate information into outcomes of clinical relevance. Recent developments in omics, such as increasingly sophisticated analytic platforms allowing changes in diagnostic strategies from the traditional focus on single or small number of analytes to what might be possible when large numbers or all analytes are measured, are now impacting patient care. Covering such topics as gene discovery, gene function (microarrays), DNA sequencing, online approaches and resources, and informatics in clinical practice, this volume concisely yet thoroughly explores this cutting-edge subject. Written in the successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on

troubleshooting and avoiding known pitfalls. Authoritative and easily accessible, *Clinical Bioinformatics, Second Edition* serves as an ideal guide for scientists and health professionals working in genetics and genomics.

During the first twenty days of July 1977, Sri Chinmoy delivered one hundred short talks. These talks were given at his public esraj performances, at picnics, even at a local high school playground after morning sports practice. In very few ways, though, can these pieces really be called talks.

They contain a rhythmic, almost musical quality more like blank verse than prose. More importantly, they express a flow of ideas so subtle and melodic that they cry out to be felt and assimilated on an intuitive plane. Before speaking, Sri Chinmoy would enter into a high meditative state and then speak extemporaneously. These talks, then, are expressions of a state of consciousness far beyond the mind's reach: short, illumining bursts of light from the Master's boundless Realisation-Sun.

Metal-organic frameworks are among the most promising novel materials. The concept of MOFs was first introduced in 1990. They were actually initially used in catalysis, gas separation, membranes, electrochemical sensors. Later on, they were introduced as SPE sorbents for PAHs (Polycyclic Aromatic Hydrocarbons) in environmental water samples, then the range expanded to the field of analytical chemistry, both in chromatographic separation and sample preparation, with great success in, e.g., SPE and SPME (Solid Phase Micro-extraction). Since then, the number of analytical applications implementing MOFs as sorbents in sorptive sample preparation approaches is increasing. This is reinforced by the fact that, at least theoretically, an infinite number of structures can be designed and synthesized, thus making tuneability one of the most unique characteristics of MOF materials. Moreover, they have been designed in various shapes, such as columns, fibers, and films, so that they can meet more analytical challenges with improved analytical features. Their exceptional properties attracted the interest of analytical chemists who have taken advantage of the unique structures and properties and have already introduced them in several sample pretreatment techniques, such as solid phase extraction, dispersive SPE, magnetic solid phase extraction, solid phase microextraction, stir bar sorptive extraction, etc.
