This book is a compilation of case study ideas in the areas of production, operation, supply chain and logistics management (POM-SCL), also incorporating operation strategies. This book has been designed conforming to the standards of this common subject for the courses of Master of Business Administration (MBA) and Post Graduate Diploma in Management (PGDM) prescribed by the All India Council of Technical Education (AICTE) and University Grants Commission (UGC). The book consists of sixty five case study ideas covering almost the entire gamut of

the subject concerned. All these cases are based on Indian organizations/industries using the characters with names typically Indian and the narrations of these cases reflect Indian work culture, value systems and ethos. All these cases are followed by a set of about half a dozen questions pertaining to the narrations with the corresponding answers suggested for the guidance of the teachers and the students alike. Apart from making the book very convenient and handy for studying the subject, it is also aimed at dispelling fears and apprehensions among the students with non-science/non-technical background that they seem to have about this subject. Getting familiar with the numerical exercises given and solved in this book by practice will make passing this subject a cakewalk for any average student. The cases are so designed as to expose the students to the realities and challenges to the actual professional life while still seating in the class rooms, much before entering a professional career. The book provides a colossal value addition as both a complement and a supplement to the theories in the text books.

Originally published in 1983. The Indian nuclear power programme, both the earliest in the Third World and also one of the most comprehensive, is an important and instructive subject for a wide-ranging and detailed study. This book examines the origins and rationale of the Indian programme in the context of energy resources and consumption. It traces the progress of its historical development and leads up to an evaluation of its performance, in both technical and economic terms of both individual reactors and the programme as a whole. In addition, the book discusses India's nuclear explosion of 1974 and the possibilities for novel developments in nuclear power and other energy sources, such as coal, biogas, hydro and solar power. The author then sets the Indian programme into the world picture by comparing developments in India with those of the Third World (including developments in China and South Africa) and discusses the overall prospects for the Third World. This extremely informative account will appeal to readers with interest in energy, science, technology and Third World developments.

Revolution in military affairs has made armaments/weapons a major component of defence capability. The exponential growth of technology has resulted in the cutting edge being eroded very rapidly necessitating constant up gradation / replacement of defence hardware. Apart from government policies and capital intensiveness the DIB also has to view production and technology management procedures, research and development base, and human resource development for its sustenance. This book examines the technological life cycle of defence equipment and enumerates the experience and practices followed by some developed countries towards creating a vibrant defence industrial base. This is followed by an analysis of policies with regard to Defence Expenditure, Defence Acquisition and offset clauses for Import. The present status of Indian DIB, Research and Development Infrastructure, Ordnance factories and other Science and Technology agencies too has been elucidated to arrive at what is presently available. The sectoral requirements in terms of capability required by our land, sea and air forces have also been identified to include Electronic and Cyber Warfare

The availability of fossil fuels required for power plants is reducing and their costs increasing rapidly. This gives rise to increase in the cost of generation of electricity. But electricity regulators have to control the price of electricity so that consumers are not stressed with high costs. In addition, environmental considerations are forcing power plants to reduce CO₂ emissions. Under these circumstances, power plants are constantly under pressure to improve the efficiency of operating plants, and to reduce fuel consumption. In order to progress in this direction, it is important that power plants regularly audit their energy use in terms of the operating plant heat rate and auxiliary power consumption. Energy Audit of Thermal Power, Combined Cycle, and Cogeneration Plants attempts to refresh the fundamentals of the science and engineering of thermal power plants, and establishes its link with the real power plant performance data through case studies, and further developing techno-economics of the energy efficiency improvement measures. This book will rekindle interest in energy audits and analysis of the data for designing and implementation of energy conservation measures on a continuous basis.

Training Manual on Steam Turbines & Auxiliaries (Non Reheat Type) The Energy and Resources Institute (TERI)

Presenting the newest approaches to the design and operation of steam turbines, this book also explores modern techniques for refurbishment of aging units. It covers recent engineering breakthroughs and new approaches to transient operating conditions, as well as improved information support for operational personnel. An authoritative guide for power plant engineers, operators, owners and designers on all of these crucial developments, this book fully describes and evaluates the most important new design and operational improvement opportunities for the full spectrum of today's steam turbines - from the newest

and most advanced to the more common existing systems.

Highly Recommended for : Power Plant Professionals seeking high growth in career Interview preparations for power plant jobs A comprehensive training manual on Steam Turbines & auxiliaries (Non Reheat Type) covering all aspects for thermal power plants. Its a 300 page Spiral bound manual must for every power plant professional. The manual contains text, images/drawings & illustrations. So far the books written on thermal plants describe mostly the reheat type units. These books are intended for technical personnel working in utility plants but, again, most of them deal predominantly with the theoretical aspects of turbines and their auxiliaries and lack in practical side of the subject. The aim is to give following benefits to the reader: To provide an in-depth knowledge of plant and equipment to the plant professionals associated with industrial boilers and turbines. It is to be noted that most of the industrial thermal units (like captive power plants attached to main technological units) are of non-reheat type. To cover the practical aspects of thermal power stations missing in most of the books available in the market. The book describes in details the constructional features of the plant and equipment, their operation and maintenance and overhauling procedures, performance monitoring as well as troubleshooting. To cover the theoretical aspects of a thermal unit necessary to be known to the professionals for thorough understanding of the systems involved. This knowledge would assist them: In selecting the plant and equipment suitable to their requirement In operating and maintaining the plant with best efficiency, availability and reliability The book is a must for those working professionals who aspire for a fast growth of their professional career. It will also be of immense help to the personnel preparing for boiler proficiency examinations. It contains following topics: Chapter - 1 Thermodynamics of a Steam Turbine Chapter - 2 Steam Turbine Fundamentals Chapter - 3 Constructional features of steam turbines Chapter - 4 The lubricating oil system Chapter -

5 Steam turbine governing system Chapter - 6 Steam turbine protection system Chapter - 7 Turbovisory system Chapter - 8 Turbine gland sealing system Chapter - 9 Turbine system and cycles Chapter - 10 Condensers, deaerators and closed feedwater heater Chapter - 11 Main and auxiliary cooling water systems and cooling towers Chapter - 12 Turbine Plant Pumps Chapter - 13 Condensate and feed water treatment Chapter - 14 Turbine Plant Operation Chapter - 15 Turbine Plant Maintenance Chapter - 16 Turbine performance and optimization
