It is well known that many children and adolescents entering the juvenile justice system suffer from serious mental disorders. Yet until now, few resources have been available to help mental health and juvenile justice professionals accurately identify the mental health needs of the youths in their care. Filling a crucial gap, this volume offers a practical primer on screening and assessment together with in-depth reviews of over 20 widely used instruments. Comprehensive and timely, it brings together leading experts to provide authoritative guidance in this challenging area of clinical practice. Grounded in extensive research and real world practical experience, this is an indispensable reference for clinical and forensic psychologists, social workers, and psychiatrists, as well as juvenile justice administrators and others who work with youths in the justice system. An informative resource for students, it is an ideal supplemental text for graduate-level courses.

It has long been appreciated among clinical neuropsychologists that both primary and secondary factors contribute to cognitive dysfunction in neurological patients. Primary influences are the direct result of the extent and location of damage to the brain. Secondary influences stem from something associated with brain injury or disease besides the specific areas of the brain affected. For example, a patient with a neurological disease may develop depression, something which in turn often impacts cognitive functioning. Other secondary factors associated with disease besides depression can also negatively impact cognitive functioning, including anxiety, pain, fatigue, and motor

impairments, to name a few. Despite the widespread appreciation of the importance of such secondary factors on cognitive functioning in clinical neuropsychology, there has never been a single source for this information that is readily available to clinicians and researchers. The present volume provides such a source, using an evidence-based framework comprised of two broad sections. The first section includes chapters that comprehensively address particular secondary influences, independent of any particular neurological disorder. For example, there are chapters on the impact on cognitive functioning of depression, anxiety, fatigue, pain, diagnosis threat, and symptom invalidity. The second section has chapters that focus on specific neurological conditions and the most salient secondary factors that need to be considered in these conditions. Multiple Sclerosis, HIV, Parkinson's Disease, Traumatic Brain Injury, Alzheimer's Disease/MCI/Stroke, and Epilepsy are all considered. The chapters include vivid case studies that illustrate the principles outlined in the chapters to help clinicians consider how such principles can apply to particular patients. Chapters also include evidence-based guidelines for clinical practice. The final chapter highlights some areas especially in need of further research and study that will be of particular interest and importance to clinicians.

Assessing Psychological Trauma and PTSD Guilford Publications "Psychology of Trauma 101 is exceptionally well-written, easy to read, and enriched with empirical findings and discussions related to trauma psychology. Therefore, this book would help any beginning mental health professional better understand the current state of trauma research, theory, and treatment; and thus, Psychology of Trauma 101 is highly recommended." -- Erin K. Poindexter, Journal of Loss and Trauma As trauma research and practice grow, practitioners, trainees, and others struggle to acquire and apply critical information to help the traumatized. In Psychology of Trauma 101, Lesia Ruglass and Kathleen Kendall-Tackett fill this void with a highly readable and reliable guide for practitioners and students in promoting posttraumatic growth and resilience. Charles R. Figley, PhD, Tulane University Our knowledge about the psychological effects of traumatic events has grown dramatically over the past three decades. Psychology of Trauma 101 is a concise, current, and accessible overview of this critical issue, including posttraumatic stress disorder (PTSD), its causes, and its physical and mental consequences. Grounded in the most up-to-date research and theories on trauma and its effects, this text not only covers the concepts of what trauma is and the ways in which different kinds of traumas affect people, but also considers how it is diagnosed in the wake of DSM-5 and is treated with both conventional and alternative methods. Richly illustrated with first-person accounts from trauma survivors, this book encompasses theories, diagnosis, and treatment as well as how trauma affects family members and caregivers. It also addresses the variables of gender, race/ethnicity, and culture as they bear on trauma psychology and the potential health consequences of trauma. In addition, the book illuminates controversies in the field and such emerging topics as posttraumatic growth, multiple traumas, and how traumatic events affect communities. Written by a team of leading researchers and clinicians in the field, the book is an ideal introduction to this critical topic for students and practitioners. Key Features Provides a comprehensive yet concise overview of trauma and PTSD Considers theoretical frameworks for understanding trauma and its impact on physical and mental health Addresses how trauma is diagnosed and treated with both conventional and alternative approaches Covers posttraumatic

growth, multiple traumas, and caregiver issues such as burnout and self-care Includes plentiful firsthand accounts from trauma survivors The Psych 101 Series Short, reader-friendly introductions to cutting-edge topics in psychology. With key concepts, controversial topics, and fascinating accounts of up-to-the-minute research, The Psych 101 Series is a valuable resource for all students of psychology and anyone interested in the field. The research base on complex psychological trauma has grown significantly in recent years. Yet even with the development of more effective techniques for treating complex trauma survivors, therapists often struggle to build strong relationships with these severely distressed clients. In this guide, the authors present an approach for helping adult clients move through the three phases of posttraumatic recovery -- and for managing the inevitable roadblocks and relationship issues that occur. The introductory chapters explore how complex trauma emerges from chronic victimization and the disruption of attachment bonds in childhood or adulthood and review diagnostic considerations. Two extended case examples highlight clinical issues that arise with this population and, running throughout the chapters, show how to use a secure therapeutic alliance as a foundation for utilizing evidence-based treatment strategies. The authors demonstrate ways to weave together elements of cognitive-behavioral, psychodynamic, relational, and systemic therapies, along with other proven approaches, in the service of working toward clearly defined therapeutic goals. In Phase 1, the emphasis is basic safety and personal stabilization. Phases 2 and 3 address trauma processing and the challenges of creating a new, more satisfying

life. Strategies for tailoring interventions to each individual's needs and strengths, aided by ongoing assessment, are detailed. Applications in group, couple, and family therapy are also discussed.

The Workshop on Integrating New Measures of Trauma into the Substance Abuse and Mental Health Services Administration's (SAMHSA) Data Collection Programs, held in Washington, D.C. in December 2015, was organized as part of an effort to assist SAMHSA and the Office of the Assistant Secretary for Planning and Evaluation of the U.S. Department of Health and Human Services in their responsibilities to expand the collection of behavioral health data to include measures of trauma. The main goals of the workshop were to discuss options for collecting data and producing estimates on exposure to traumatic events and PTSD, including available measures and associated possible data collection mechanisms. This report summarizes the presentations and discussions from the workshop.

There are few clinical problems in the sleep medicine field that are more challenging than the sleep difficulties experienced by individuals suffering from post-traumatic stress disorder (PTSD). This book offers a unique, complete resource addressing all the basic concepts and clinical applications in sleep medicine in settings where combat-related PTSD is commonplace. Authored by leading international experts in the field of sleep/military medicine, *Sleep and Combat-Related Post Traumatic Stress Disorder* is organized in six sections and provides a broad perspective of the field, from the established theories to the most recent developments in research, including the latest neuroscientific perspectives surrounding sleep and PTSD. The result is a full assessment of sleep in relation to combat-related PTSD and a gold standard volume that is the first of its kind. This comprehensive title will be of great interest to a wide range of

clinicians -- from academics and clinicians working within or in partnership with the military health care system to veteran hospital physicians and all health personnel who work with war veterans.

This book provides an overview of the core research and theory on polyvictimization - exposure to multiple types of victimization that may have negative and potentially lifelong biopsychosocial impacts. The contributors to the volume address such topics as measurement issues in how polyvictimization should be assessed and measured; developmental risks of early childhood polyvictimization for maltreated children in foster care; gender differences in polyvictimization and its consequences among juvenile justice-involved youth; the importance of trauma-focused treatment for polyvictimized youth in the juvenile justice system; and the nature of polyvictimization in the internet era. Suited to

readers who are new to the topic including graduate and undergraduate students, as well as researchers and clinicians who want a concise update on the latest empirical research from the frontiers of this field, this book provides findings and methodological innovations of interest to researchers and human service professionals. This book was originally published as a special issue of the Journal of Trauma & Dissociation.
