Mohs Micrographic Surgery, an advanced treatment procedure for skin cancer, offers the highest potential for recovery—even if the skin cancer has been previously treated. This procedure is a state-of-the-art treatment in which the physician serves as surgeon, pathologist, and reconstructive surgeon. It relies on the accuracy of a

microscope to trace and ensure removal of skin cancer down to its roots. This procedure allows dermatologists trained in Mohs Surgery to see beyond the visible disease and to precisely identify and remove the entire tumor, leaving healthy tissue unharmed. This procedure is most often used in treating two of the most common forms of skin cancer: basal cell carcinoma and squamous cell carcinoma. The cure rate for Mohs Micrographic Surgery is the highest of all treatments for skin cancer—up to 99 percent even if other forms of treatment have failed. This procedure, the most exact and precise method of tumor removal, minimizes the chance of regrowth and lessens the potential for scarring or disfigurement

This book compiles the best evidence in procedural dermatology, including skin cancer surgery, laser techniques, minimally invasive cosmetic surgery, and emerging techniques. Building on the highly successful first edition, this volume provides much expanded coverage of a range of topics. The best information is provided to reveal the most appropriate interventions for particular indications, optimal treatment techniques, and strategies for avoiding adverse events. Evidence-Based Procedural Dermatology, 2nd edition, includes two types of chapters: procedures and indications. Each chapter is designed to be clear

and concise, with tables and flowcharts to showcase main findings. Each cited study is tagged with a level of evidence, and every recommendation includes a strength of evidence score. More than double

the length of the first edition, this newest edition includes added procedures and interventions like: new lasers and energy devices for skin resurfacing and pigmentation; non-invasive fat reduction and skin tightening using

cryolipolysis, radiofrequency, ultrasound, and chemical adipocytolysis; specific post-skin cancer excision reconstruction techniques; and novel approaches for melanoma.
