This book constitutes the thoroughly refereed post-conference proceedings of the International IFIP WG 5.7 Conference on Advances in Production Management Systems, APMS 2011, held in Stavanger, Norway, in September 2011. The 66 revised and extended full papers were carefully reviewed and selected from 124 papers presented at the conference. The papers are organized in 3 parts: production process, supply chain management, and strategy. They represent the breadth and complexity of topics in operations management, ranging from optimization and use of technology, management of organizations and networks, to sustainable production and globalization. The authors use a broad range of methodological approaches spanning from grounded theory and qualitative methods, via a broad set of statistical methods to modeling and simulation techniques.

Originally published in 1904, this book discusses the fundamental importance of education and theories of education within the works of Erasmus. Beginning with an outline of the life and characteristics of Erasmus, the text moves through his educational aims, ideas on the beginnings of the educational process and conception of the liberal arts. The second part of the text presents four extracts from the writings of Erasmus which express his views on education. Apart from a short chapter from *De Conscribendis Epistolis*, which is given in Latin with English headings, these extracts are all translated into English. This book will be of value to anyone with an interest in Erasmus and the

historical development of education.

Beginning with her award-winning book *Theology in the Age of Scientific Reasoning* (1990), Nancey Murphy has used philosophy of science as a way into, and catalyst for, fresh thinking in cosmology, divine action, epistemology, cognitive neuroscience, theological anthropology, philosophy of mind, and Christian virtue ethics. The essays in this book, written by her students and colleagues, creatively honor Murphy by extending a number of her core insights within their respective disciplines. An introduction provides both an account of Murphy's unique location (an Anabaptist teaching at an evangelical graduate institution) and a summary of her contributions to theology as a philosopher of science whose corpus more than any other epitomizes the paradigm shift in philosophy sometimes called "Anglo-American postmodernity." Subsequently, fourteen essays provide unique engagements with Murphy on subjects including divine action, the interaction between science and theology, epistemology, the nature of humanity, and political theology. In its entirety, *Practicing to Aim at Truth* provides the first in-depth interaction with and extension of Nancey Murphy's unique school of thought, providing a resource both for those wishing to extend her research program as well as those wishing to understand it charitably in order to critique it.

An essential volume in the NASA History Series by Robert C. Seamans, Jr., the Associate Administrator of NASA during the Apollo program. A stirring insider's account of NASA and the manned space program at the highest levels. Relationships with the Department of Defense, the Apollo 204 fire, the assassination of President Kennedy, and more. *Aiming at Targets* is a series of fascinating topical vignettes covering the author's professional

life. Taken together, like broad brushstrokes in an impressionist painting, they give a better picture of Bob Seamans and his work than a detailed recitation of facts and dates could hope to do. This is a cheerful account of an interesting and successful career. The book is full of good stories, with many memorable characters. Like the proverbial sundial, it counts the sunny hours.

This book reports on the proceeding of the 5th International Conference on Intelligent, Interactive Systems and Applications (IISA 2020), held in Shanghai, China, on September 25-27, 2020. The IISA proceedings, with the latest scientific findings, and methods for solving intriguing problems, are a reference for state-of-the-art works on intelligent and interactive systems. This book covers nine interesting and current topics on different systems' orientations, including Analytical Systems, Database Management Systems, Electronics Systems, Energy Systems, Intelligent Systems, Network Systems, Optimization Systems, and Pattern Recognition Systems and Applications. The chapters included in this book cover significant recent developments in the field, both in terms of theoretical foundations and their practical application. An important characteristic of the works included here is the novelty of the solution approaches to the most interesting applications of intelligent and interactive systems.

Practicing to Aim at Truth Routledge

First published in 1951, this book recounts the nostalgic antics of hell-raising pistol shooters of the 1930's. It is complete and unexpurgated and is the hot blasts of mirth from the shaky guns of Lee Echols, who fired for many years before World War II with the U.S. Treasury Department Pistol Team. Lee Echols' stock-in-trade was the business of making a pistol go whangety-bang with

a fair degree of accuracy. However, this always had to take a back seat to his hell-raising antics and inspired tom-foolery, which had him known as the Clown Prince of pistoleers on every range in the Western Hemisphere.

In times of ever-changing healthcare policy, many organizations have developed methods for reforming and optimizing healthcare systems. One prevailing healthcare approach is the Quadruple Aim, which incorporates four different goals: improving population health; improving experience of care; lowering healthcare costs; and improving provider work life (team vitality). Created by the Institute for Healthcare Improvement, the Quadruple Aim method is not nursing-specific, but its framework for optimizing health system performance is coherent with the nursing profession today. This book argues that the widespread adoption of the Quadruple Aim could help create a sustainable healthcare system. Using the work and legacy of nursing pioneer Florence Nightingale, this book provides an early example of successful, holistic healthcare that balances cost-effectiveness with quality of care for both patients and nurses.

The Quadruple Aim in Nursing and Healthcare Good Press

Written by the President and CEO of the Institute for Healthcare Improvement (IHI) and a leading health care journalist, this groundbreaking book examines how leading organizations in the United States are pursuing the Triple Aim—improving the individual experience of care, improving the health of populations, and reducing the per capita cost of care. Even with major steps forward – including the Affordable Care Act and the creation of the Center for Medicare and Medicaid Innovation -- the national health care debate is too often poisoned by negativity. A quieter, more thoughtful, and vastly more constructive conversation continues among health care leaders and professionals throughout the country. Innovative solutions are being designed and implemented at the local level, and countless health care organizations are demonstrating breakthrough remedies to some of the toughest and most expensive challenges in health care. Pursuing the Triple Aim shares compelling stories that are

emerging in locations ranging from Pittsburgh to Seattle, from Boston to Oakland, focused on topics including improving quality and lowering costs in primary care; setting challenging goals to control chronic disease with notable outcomes; leveraging employer buying power to improve quality, reduce waste, and drive down cost; paying for care under an innovative contract that compensates for quality rather than quantity; and much more. The authors describe these innovations in detail, and show the way toward a health care system for the nation that improves the experience and quality of care while at the same time controlling costs. As the Triple Aim moves from being largely an aspirational framework to something that communities all across the US can implement and learn from, its potential to become a touchstone for the work ahead has never been greater. Pursuing the Triple Aim lays out the vision, the interventions, and promising examples of success.

The purpose of this publication is to introduce a new, simpler and more effective way in which to interpret pharmaceutical aerosol

particle size data from orally inhaled products (OIPs). Currently, the compendial and regulatory requirements dictate the need for measurements by full resolution multi-stage cascade impactor (CI), a process that is demanding for the operator, time consuming, prone to experimental error, and challenging for method transfers from one laboratory to another. Furthermore, we shall show that the current practice of reducing information from mass-weighted aerodynamic particle size distribution (APSD) measurements through the use of CI stage groupings is not the most effective decision-making tool for OIP quality control (QC) in comparison with newly introduced, mutually-independent efficient data analysis (EDA) metrics that can be derived either from full resolution or abbreviated impactor measurements (AIM).

State of the art resource covering key technologies and related theories of inter-satellite links *Inter-Satellite Links Technology* explores satellite networking as a growing topic in the field of communication technology, introducing the definition, types, and working frequency bands of inter-satellite links, discussing the number of orbital elements of the spacecraft motion state under two-body motion and their conversion relationship, and establishing the basic demand model for inter-satellite link network, chain topology model, and transmission protocol model. The book focuses on the analysis and introduction of the principles and error sources of microwave and laser inter-satellite ranging, including the basic composition, workflow, and constraints of the laser inter-satellite link, and related design principles of the inter-satellite laser transmitter and receivers. Later chapters also discuss theories and methods of acquisition, alignment, and tracking, the impact of alignment errors on performance, and inter-satellite link modulation and its implementation. Specific sample topics covered in *Inter-Satellite Links Technology* include: Pulse position modulation (PPM), Differential Pulse Position Modulation (DPPM), Digital Pulse Interval Modulation (DPIM), and Double-head pulse interval modulation (DH-PIM) Basic demand model of inter-satellite link network application, including basic configuration of constellations and inter-satellite transmission networks Inter-satellite ranging accuracy, principles of microwave inter-satellite ranging, and analysis of microwave ranging error sources Effect of

tracking error on the beam distribution at the receiving end and influence of tracking and pointing error on communication error rate Inter-Satellite Links Technology serves a completely comprehensive resource on the subject and is a must-have reference for experts and scholars in aerospace, along with graduates and senior undergraduates in related programs of study.

Personal robots are about as advanced today as personal computers were on the eve of the first IBM PC in the early 1980s. They are still the domain of hobbyists who cobble them together from scratch or from kits, join local clubs to swap code and stage contests, and whose labor of love is setting the stage for a technological revolution. This book will deconstruct the 30 regional winning robot designs from the FIRST Robotics Competition in 2006. The FIRST Robotics Competition (held annually and co-founded by Dean Kamen and Woodie Flowers) is a multinational competition that teams professionals and young people to solve an engineering design problem in an intense and competitive way. In 2005 the competition reached close to 25,000 people on close to 1,000 teams in 30 competitions. Teams came from Brazil, Canada, Ecuador, Israel, Mexico, the U.K., and almost every U.S. state. The competitions are high-tech spectator sporting events that have gained a loyal following because of the high caliber work featured. Each team is paired with a mentor from such companies as Apple, Motorola, or NASA (NASA has sponsored 200 teams in 8 years). This book looks at 30 different robot designs all based on the same chassis, and provides in-depth information on the inspiration and the technology that went into building each of them. Each robot is featured in 6-8 pages providing readers with a solid understanding of how the robot was conceived and built. There are sketches, interim drawings, and process shots for each robot.

This book develops a conception of student flourishing as the overarching aim of education. Taking as its basis the Aristotelian concept of eudaimonia, it provides a theoretical study of the foundations of flourishing that goes well beyond Aristotle's approach. Flourishing as the Aim of Education argues that the 'good life' of the student, to which education should contribute,

must involve engagement with self-transcendent ideals and ignite awe-filled enchantment. It allows for social, individual and educational variance within the concept of flourishing, and it engages with a host of socio-political as well as 'spiritual' issues that are often overlooked in literature discussing character education. Each chapter closes with food for thought for practitioners who can directly facilitate student flourishing. An outgrowth of the author's previous monograph Aristotelian Character Education, this book follows new directions in questioning how to educate young people towards a life of overall flourishing. It will be of great interest to researchers, academics and post-graduate students in the fields of character education, moral education and moral philosophy, as well as to educators and policy-makers.

Taking Aim at the Arms Trade Routledge

This book gives an account of work that I have done over a period of decades that sets out to solve two fundamental problems of philosophy: the mind-body problem and the problem of induction. Remarkably, these revolutionary contributions to philosophy turn out to have dramatic implications for a wide range of issues outside philosophy itself, most notably for the capacity of humanity to resolve current grave global problems and make progress towards a better, wiser world. A key element of the proposed solution to the first problem is that physics is about only a highly specialized aspect of all that there is - the causally efficacious aspect. Once this is understood, it ceases to be a mystery that natural science says nothing about the experiential aspect of reality, the colours we perceive, the inner experiences we are aware of. That natural science is silent about the experiential aspect of reality is no reason whatsoever to hold that the experiential does not objectively exist. A key element of the proposed solution to the second problem is that physics, in persistently accepting unified theories only, thereby makes a substantial metaphysical assumption about the universe: it is such that a unified pattern of physical law runs through all phenomena. We need a new conception, and kind, of physics that acknowledges, and actively seeks to improve, metaphysical presuppositions inherent in the methods of physics. The problematic aims and methods of physics need to be improved as physics proceeds. These are the ideas that have fruitful implications, I set out to show, for a wide range of issues: for

philosophy itself, for physics, for natural science more generally, for the social sciences, for education, for the academic enterprise as a whole and, most important of all, for the capacity of humanity to learn how to solve the grave global problems that menace our future, and thus make progress to a better, wiser world. It is not just science that has problematic aims; in life too our aims, whether personal, social or institutional, are all too often profoundly problematic, and in urgent need of improvement. We need a new kind of academic enterprise which helps humanity put aims-and-methods improving meta-methods into practice in personal and social life, so that we may come to do better at achieving what is of value in life, and make progress towards a saner, wiser world. This body of work of mine has met with critical acclaim. Despite that, astonishingly, it has been ignored by mainstream philosophy. In the book I discuss the recent work of over 100 philosophers on the mind-body problem and the metaphysics of science, and show that my earlier, highly relevant work on these issues is universally ignored, the quality of subsequent work suffering as a result. My hope, in publishing this book, is that my fellow philosophers will come to appreciate the intellectual value of my proposed solutions to the mind-body problem and the problem of induction, and will, as a result, join with me in attempting to convince our fellow academics that we need to bring about an intellectual/institutional revolution in academic inquiry so that it takes up its proper task of helping humanity learn how to solve problems of living, including global problems, and make progress towards as good, as wise and enlightened a world as possible.

Ready Fire Aim: The Mainfreight Story Food for Life Global

If you're like me, you've probably read all the books on how to improve your game, including the classics from Phil Capelle. I don't propose that this book will cover every facet of the game of billiards; Capelle's books do a great job of that. However, what I will declare is that The YOGA of POOL - Secrets to becoming a Champion in Billiards and in Life will provide you all the essential tools you need to become a great player, while simultaneously helping to make you a better person. The book provides the fundamental ingredients of what makes a great player. The chapters are concise and digestible and not filled with unnecessary fluff. The idea behind the book is to give you an easy-to-understand roadmap to success in the form of short

essays describing key elements of the game. I need to point out that the sections dealing with aiming are taken from my other book, *World's Best Aiming System for Billiards*. I felt it was necessary to include the same information for completeness of this book. If you already purchased my other book the *World's Best Aiming System for Billiards*, you may skip those sections. In any case, the knowledge contained within this book will certainly expand your understanding of the Three-Cut System and support your development in all other facets of the game. One glaring omission from many books on billiards is a lack of information on the mental and spiritual side of the game, including proven techniques for visualization, mind management, and confidence building exercises. You'll find them in this book, and rightly so, because to ignore the mind and spirit is akin to ignoring the driver of the vehicle. Every world-class motor racing team knows that a good driver is the difference between success and failure. As the subtitle suggests, this book is much more than the secrets for success in billiards; it is, in a way, a kind of "Covey-like" directive for the billiards enthusiast on what makes one successful in life. You may just come away from reading this book feeling a renewed sense of self-worth and optimism. I hope so. I promise you this: if you apply the following ingredients of success to your game, and in your life, you will experience monumental improvements in every aspect. My hope is that the book will serve to make you the very best player and person you can possibly be. ----- Join Paul on a journey of championship billiards and self- discovery as he reveals the essential ingredients of what

makes a great pool player and a great human being. *Nature, Aim and Methods of Microchemistry* U. S. National Aeronautics & Space Administration ***** eBook edition ***** Poolology is a breakthrough aiming system for pool players. I was once asked, "How do you aim?", and I couldn't answer. I said I didn't know, and I'm sure the player that asked me that thought I was holding out on him, keeping some great secret to myself. But it was true - other than to call it instinct, I had no idea how to aim. I'd never been taught how to aim. I just shoot balls into the pocket. This question, "How do you aim?", is what prompted me to write Poolology. After experimenting with various aiming systems, I learned that most aiming systems don't work for most people. That explains why so many pool players struggle to be consistent shot makers. I wanted to fix that. I wanted to find a system that could teach players how to aim any shot on the table, how to develop a feel for pocketing balls. No such system existed, until now. It's called Poolology! *Pursuing the Triple Aim* Skyhorse Publishing Inc. 50% OFF! Holiday Season Special Price! The first ever English language biography of Masayoshi Son, Japan's foremost IT revolutionary and SoftBank's founder, chairman and CEO. Based on over twenty years of in-depth interviews and study, Atsuo Inoue brings Son's story to life in this translation of the Japanese best seller. From his humble beginnings as a son of Korean immigrants living in a shack in southwest Japan, to his aim to become No. 1 in the world as CEO of one of Japan's largest Internet companies, Inoue richly details Son's inspiring journey

and the challenges he faced along the way. Told from the viewpoint of those who know him best—relatives, friends and business partners from around the world—the story reveals the truth about “rising Son,” the man who made “Information Revolution – Happiness for Everyone” his life’s mission. Son was born in 1957 as a third generation Korean resident in Japan’s Saga Prefecture. He entered one of the Prefecture’s most prestigious high schools, attending for just the first semester before dropping out to venture to the US. He was only 16 years old. In the US, he acquired high school graduate equivalency in just three weeks through accelerated study and then entered the University of California, Berkeley. As a college student, he earned his first million dollars for the invention of an automatic voice translator. Then he came back to Japan to found SoftBank. Continuously realizing his aspirations, he made SoftBank into a multibillion dollar enterprise. He attributes his success to making decisions with extraordinary speed and by leveraging his friendships with innovators, including his close friend Steve Jobs. “I will create a self-sustaining enterprise that lasts over 300 years.” Such bold statements have garnered Son attention from all over the world. But who is the real Masayoshi Son? The author Atsuo Inoue has covered Son’s career closely as a journalist and his insightful observations vividly paints an intimate portrait of the charismatic business revolutionary, who blends cool rational thought with fiery passion and genius. “I’ve never seen such a comprehensive account of my life.” –Masayoshi Son, Chairman & CEO of SoftBank Corp.
