More Grammar to Get Things Done MIT Press

Independent Press Award Winner, Mind Hacking for Rebels guides readers on an exciting journey into their subconscious operating system, The Matrix. With Mind Hacking for Rebels, readers learn how they, with small adjustments, can crush their inner limitations and gain access to their own POWER and FREEDOM. It includes smart and simple #mindhacks, so they can use more of their potential. Mind Hacking for Rebels also teaches how to hack one’s subconscious programming that controls up to 95% of their day and how to take command of their brain and life. Mind Hacking for Rebels shows how to overcome fears, stop inner saboteur, remove doubts and be one’s own best friend in order to maximize potential. For those who are ready to be a rebel, do as thousands of clients and course participants have done and learn effective #mindhacks from one of Europe's sharpest Mind Hackers - Karin Tydén.

CUCKOO'S EGG "O'Reilly Media, Inc."

Looks at the inner workings of the human brain, offering experiments that test vision, hearing perception, reasoning, memory, and emotion.

Hacking Multifactor Authentication "O'Reilly Media, Inc."

First in the Arbor Algebra series. A writing-based, common sense, whimsical & engaging introduction to algebra for middle-grade math students.

Disarm American Psychological Association

In Hacking Mathematics, teacher, author, and math consultant Denis Sheeran shows you how to hack your instructional approach and assessment procedures, in order to promote an amazing culture of mathematical inquiry and engagement that very few students ever see.

Statistics Hacks Apress

CO-PUBLISHED BY ROUTLEDGE AND THE NATIONAL COUNCIL OF TEACHERS OF ENGLISH Complementing Crovitz and Devereaux’s successful Grammar to Get Things Done, this book demystifies grammar in context and offers day-by-day guides for teaching ten grammar concepts, giving teachers a model and vocabulary for discussing grammar in real ways with their students. Through applied practice in real-world contexts, the authors explain how to develop students’ mastery of grammar and answer difficult questions about usage, demonstrating how grammar acts as a tool for specific purposes in students’ lives. Accessibly written and organized, the book provides ten adaptable activity guides for each concept, illustrating instruction from a use-based perspective. Middle and high school preservice and inservice English teachers will gain confidence in their own grammar knowledge and learn how to teach grammar in ways that are uniquely accessible and purposeful for students.

Mindhacker "O'Reilly Media, Inc."

In The Queer Games Avant-Garde, Bonnie Ruberg presents twenty interviews with twenty-two queer video game developers whose radical, experimental, vibrant, and deeply queer work is driving a momentous shift in the medium of video games. Speaking with insight and candor about their creative practices as well as their politics and passions, these influential and innovative game makers tell stories about their lives and inspirations, the challenges they face, and the ways they understand their places within the wider terrain of video game culture. Their insights go beyond typical conversations about LGBTQ representation in video games or how to improve “diversity” in digital media. Instead, they explore queer game-making practices, the politics of queer independent video games, how queerness can be expressed as an aesthetic practice, the influence of feminist art on their work, and the future of queer video games and technology. These engaging conversations offer a portrait of an influential community that is subverting and redefining the medium of video games by placing queerness front and center. Interviewees: Ryan Rose Aceae, Avery Alder, Jimmy Andrews, Santo Aveiro-Ojeda, Aevee Bee, Tonia B*****, Mattie Brice, Nicky Case, Naomi Clark, Mo Cohen, Heather Flowers, Nina Freeman, Jerome Hagen, Kat Jones, Jess Marcotte, Andi McClure, LLaura McGee, Seanna Musgrave, Liz Ryerson, Elizabeth Sampat, Loren Schmidt, Sarah Schoemann, Dietrich Squinkifer, Kara Stone, Emilia Yang, Robert Yang

Swing Hacks "O'Reilly Media, Inc."

Considers how our ideas about mathematics shape our individual and cultural relationship to the field. Where and how do we, as a culture, get our ideas about mathematics and about who can engage with mathematical knowledge? Sara N. Hottinger uses a cultural studies approach to address how our ideas about mathematics shape our individual and cultural relationship to the field. She considers four locations in which representations of mathematics contribute to our cultural understanding of mathematics: mathematics textbooks, the history of mathematics, portraits of mathematicians, and the field of ethnomathematics. Hottinger examines how these discourses shape mathematical subjectivity by limiting the way some groups—including women and people of color—are able to see themselves as practitioners of math. Inventing the Mathematician provides a blueprint for how to engage in a deconstructive project, revealing the limited and problematic nature of the normative construction of mathematical subjectivity. Sara N. Hottinger is Professor of Women’s and Gender Studies at Keene State College.

Flash Hacks Duke University Press

A collection of unusual projects for computer hardware geeks of all ages explains how to create such projects as a personal Lojack system, Web-enabled coffee machine, cubicle intrusion detection systems, and a laptop battery extender.

Burn Math Class Corwin Press

Frazzled by fractions? Tortured by times tables? Let The Math Guru guide you! Anyone can be a math person -- and this book will help! It's designed for kids (and their parents) struggling with math anxiety and looking for a new approach to homework, studying, tests and marks. The most common problem areas in the curriculum are broken down and explained in an affirming and upbeat tone. Author and Math Guru Vanessa Vakharia is passionate about doing away with negative stereotypes, reducing math anxiety, and creating a positive math experience for every student and she wants to be your new math BFF! Kids will encouraged to explore online resources, including inspirational videos, worksheets and additional activities.

Jousting Armadillos: An Introduction to Algebra - Student Text and Workbook Rowman & Littlefield

Protect your organization from scandalously easy-to-hack MFA security “solutions” Multi-Factor Authentication (MFA) is spreading like wildfire across digital environments. However, hundreds of millions of dollars have been stolen from MFA-protected online accounts. How? Most people who use multifactor authentication (MFA) have been told that it is far less hackable than other types of authentication, or even that it is unhackable. You might be shocked to learn that all MFA solutions are actually easy to hack. That’s right: there is no perfectly safe MFA solution. In fact, most can be hacked at least five different ways. Hacking Multifactor Authentication will show you how MFA works behind the scenes and how poorly linked multi-step authentication steps allows MFA to be hacked and compromised. This book covers over two dozen ways that various MFA solutions can be hacked, including the methods (and defenses) common to all MFA solutions. You’ll learn about the various types of MFA solutions, their strengths and weaknesses, and how to pick the best, most defensible MFA solution for your (or your customers') needs. Finally, this book reveals a simple method for quickly evaluating your existing MFA solutions. If using or developing a secure MFA solution is important to you, you need this book. Learn how different types of multifactor authentication work behind the scenes See how easy it is to hack MFA security solutions—no matter how secure they seem Identify the strengths and weaknesses in your (or your customers’) existing MFA security and how to mitigate Author Roger Grimes is an internationally known security expert whose work on hacking MFA has generated significant buzz in the security world. Read this book to learn what decisions and preparations your organization needs to take to prevent losses from MFA hacking.

Coders at Work Baen Books

Want to calculate the probability that an event will happen? Be able to spot fake data? Prove beyond doubt whether one thing causes another? Or learn to be a better gambler? You can do that and much more with 75 practical and fun hacks packed into Statistics Hacks. These cool tips, tricks, and mind-boggling solutions from the world of statistics, measurement, and research methods will not only amaze and entertain you, but will give you an advantage in several real-world situations-including business. This book is ideal for anyone who likes puzzles, brainteasers, games, gambling, magic tricks, and those who want to apply math and science to everyday circumstances. Several hacks in the first chapter alone-such as the "central limit theorem," which allows you to know everything by knowing just a little-serve as sound approaches for marketing and other business objectives. Using the tools of inferential statistics, you can understand the way probability works, discover relationships, predict events with uncanny accuracy, and even make a little money with a well-placed wager here and there. Statistics Hacks presents useful techniques from statistics, educational and psychological measurement, and experimental research to help you solve a variety of problems in business, games, and life. You'll learn how to: Play smart when you play Texas Hold 'Em, blackjack, roulette, dice games, or even the lottery Design your own winnable bar bets to make money and amaze your friends Predict the outcomes of baseball games, know when to "go for two" in football, and anticipate the winners of other sporting events with surprising accuracy Demystify amazing coincidences and distinguish the truly random from the only seemingly random--even keep your iPod's "random" shuffle honest Spot fraudulent data, detect plagiarism, and break codes How to isolate the effects of observation on the thing observed Whether you're a statistics enthusiast who does calculations in your sleep or a civilian who is entertained by clever solutions to interesting problems, Statistics Hacks has tools to give you an edge over the world's slim odds.

Kiss My Math Doubleday

TOUGH FEMALE P.I. EXPLORING THE UNDERWORLD OF A VAST STAR EMPIRE. Book two in a new series set in the world of Catherine Asaro's Skolian Empire series. Major Bhaajan achieved the impossible. Born to the Undercity, the slums below the City of Cries on the planet Raylicon, she broke free from crushing poverty and crime to become a military officer with Imperial Space Command. Now retired from military duty, she walks the mean streets of Undercity as a private investigator. And she is about to embark on her most challenging case yet. Summoned by no less than the Ruby Pharaoh herself, Major Bhaajan is tasked with finding a killer. But this is no ordinary murderer. The Ruby Pharaoh witnessed a Jagernaut cut down Assembly Councilor Tap Benton—which shouldn’t have been possible. The Jagernauts are the elite of the elite soldiers in the Imperial Space Command. What’s more, the spinal node implanted in all Jagernauts should have prevented the murder. But the Ruby Pharaoh is sure of what she saw, and she has reason to believe that the Jagernaut will kill again. Now, Major Bhaajan must hunt down a killer before it is too late. To do so, she must return to the one place on Raylicon she knows best: Undercity. At the publisher's request, this title is sold without DRM (Digital Rights Management). About prequel Undercity: "Asaro plants herself firmly into that grand SF tradition of future history franchises favored by luminaries like Heinlein, Asimov, Herbert, Anderson, Dickson, Niven, Cherryh, and Baxter. . .They don't write em like that anymore! Except Asaro does, with . . . up-to-the-minute savvy!"—Locus "[Baahjan], who starts out keeping an emotional distance from the people in the Undercity soon grows to think of them as her community once more. Asaro . . . returns to the Skolian empire's early history to tell Bhajaan's story."—Booklist "Asaro delivers a tale rich with

the embedded history of her world and bright with technical marvels. Her characters are engaging and intriguing and there is even a bit of romance. What really touched my heart was Bhaaj's interaction with the children of the aqueducts. I spent the last fifty pages of the book sniffing into a tissue."—SF Crowsnet "I'm hooked, both on her writing and her Skolian universe. This book had everything I wanted: strong characters, a new and unique world, and a plot that isn't as simple as it first appears."—TerryTalk About Catherine Asaro's Skolian saga: "Entertaining mix of hard SF and romance."—Publishers Weekly "Asaro's Skolian saga is now nearly as long and in many ways as compelling as Dune, if not more so, featuring a multitude of stronger female characters."—Booklist "Rapid pacing and gripping suspense."—Publisher's Weekly

Before the Internet became widely known as a global tool for terrorists, one perceptive U.S. citizen recognized its ominous potential. Armed with clear evidence of computer espionage, he began a highly personal quest to expose a hidden network of spies that threatened national security. But would the authorities back him up? Cliff Stoll's dramatic firsthand account is "a computer-age detective story, instantly fascinating [and] astonishingly gripping" (Smithsonian). Cliff Stoll was an astronomer turned systems manager at Lawrence Berkeley Lab when a 75-cent accounting error alerted him to the presence of an unauthorized user on his system. The hacker's code name was "Hunter"—a mysterious invader who managed to break into U.S. computer systems and steal sensitive military and security information. Stoll began a one-man hunt of his own: spying on the spy. It was a dangerous game of deception, broken codes, satellites, and missile bases—a one-man sting operation that finally gained the attention of the CIA . . . and ultimately trapped an international spy ring fueled by cash, cocaine, and the KGB.

Math Hacks Houghton Mifflin Harcourt

"Joe Feldman shows us how we can use grading to help students become the leaders of their own learning and lift the veil on how to succeed. . . . This must-have book will help teachers learn to implement improved, equity-focused grading for impact." —Zaretta Hammond, Author of Culturally Responsive Teaching & The Brain Crack open the grading conversation Here at last—and none too soon—is a resource that delivers the research base, tools, and courage to tackle one of the most challenging and emotionally charged conversations in today's schools: our inconsistent grading practices and the ways they can inadvertently perpetuate the achievement and opportunity gaps among our students. With Grading for Equity, Joe Feldman cuts to the core of the conversation, revealing how grading practices that are accurate, bias-resistant, and motivational will improve learning, minimize grade inflation, reduce failure rates, and become a lever for creating stronger teacher-student relationships and more caring classrooms. Essential reading for schoolwide and individual book study or for student advocates, Grading for Equity provides A critical historical backdrop, describing how our inherited system of grading was originally set up as a sorting mechanism to provide or deny opportunity, control students, and endorse a "fixed mindset" about students' academic potential—practices that are still in place a century later A summary of the research on motivation and equitable teaching and learning, establishing a rock-solid foundation and a "true north" orientation toward equitable grading practices Specific grading practices that are more equitable, along with teacher examples, strategies to solve common hiccups and concerns, and evidence of effectiveness Reflection tools for facilitating individual or group engagement and understanding As Joe writes, "Grading practices are a mirror not just for students, but for us as their teachers." Each one of us should start by asking, "What do my grading practices say about who I am and what I believe?" Then, let's make the choice to do things differently . . . with Grading for Equity as a dog-eared reference.

Peter Seibel interviews 15 of the most interesting computer programmers alive today in Coders at Work, offering a companion volume to Apress's highly acclaimed best-seller Founders at Work by Jessica Livingston. As the words "at work" suggest, Peter Seibel focuses on how his interviewees tackle the day-to-day work of programming, while revealing much more, like how they became great programmers, how they recognize programming talent in others, and what kinds of problems they find most interesting. Hundreds of people have suggested names of programmers to interview on the Coders at Work web site: www.codersatwork.com. The complete list was 284 names. Having digested everyone's feedback, we selected 15 folks who've been kind enough to agree to be interviewed: Frances Allen: Pioneer in optimizing compilers, first woman to win the Turing Award (2006) and first female IBM fellow Joe Armstrong: Inventor of Erlang Joshua Bloch: Author of the Java collections framework, now at Google Bernie Cosell: One of the main software guys behind the original ARPANET IMPs and a master debugger Douglas Crockford: JSON founder, JavaScript architect at Yahoo! L. Peter Deutsch: Author of Ghostscript, implementer of Smalltalk-80 at Xerox PARC and Lisp 1.5 on PDP-1 Brendan Eich: Inventor of JavaScript, CTO of the Mozilla Corporation Brad Fitzpatrick: Writer of LiveJournal, OpenID, memcached, and Perlbal Dan Ingalls: Smalltalk implementor and designer Simon Peyton Jones: Coinventor of Haskell and lead designer of Glasgow Haskell Compiler Donald Knuth: Author of The Art of Computer Programming and creator of TeX Peter Norvig: Director of Research at Google and author of the standard text on AI Guy Steele: Coinventor of Scheme and part of the Common Lisp Gang of Five, currently working on Fortress Ken Thompson: Inventor of UNIX Jamie Zawinski: Author of XEmacs and early Netscape/Mozilla hacker
